

# DEPILAR SYSTEM™

# DEPILAR SYSTEM™

The Depilar System is used directly after a waxing to target and destroy active hair follicles. The treatment is an in-spa or in-salon treatment performed by professional skincare and beauty therapists.

For further information on the Depilar System, please talk to your esthetician or visit our website at:

## It's great to be free!

This new and enhanced enzyme-based formula provides efficacy rates exceeding other products of its kind on the market, including previous generations of enzyme-based hair removal and costly laser treatments.

This advanced technology is simple to use, and yields results that are anything but ordinary.

## Hair Today Gone Tomorrow

**The next generation of enzyme-based hair removal is here!**

The Depilar System uses the latest in advanced scientific research to offer an effective and affordable method for a lasting reduction of unwanted body hair for all sexes, races, hair colors, and hair types.

## Three simple steps to being hair free

The two Depilar System gels are applied to the skin by a professional esthetician or skincare professional in a salon or spa following this simple procedure:

- 1) Area is waxed removing hair by the root
- 2) Inhibitor gel is applied and massaged into the skin
- 3) Activator gel is applied and massaged into the skin

## Duration of treatment

Don't give up, don't give in, never surrender!

All good things take time and the Depilar System will work if the treatment protocol is followed.

Successive and regular treatments are required over 16 to 24 months (depending on area) to completely treat all targeted hair. After each successive treatment the regrowth time for remaining hair will be longer and the hairs finer and easier to remove. A noticeable decrease in hair growth will be visible after the fourth treatment.

To properly treat all hair follicles with the Depilar System 2-4 week intervals between treatments are recommended for treatments on the face and 4-6 week intervals for treatments on the body.

## Who can be treated with the Depilar System

Anyone can be treated with the Depilar System! Men or women, regardless of skin type or color, or color of hair - all can be treated assuming they have no contraindication to waxing. Depilar System is well tolerated, allergy tested, gentle and efficient - with no side effects.

For best results the Depilar System is used after a waxing where the hair is removed by the root. The hair must be at least 1/4 inch in length to ensure an effective waxing, enabling the Depilar System enzyme-based gels to enter the empty follicles and break down the cells responsible for hair growth.

## How it works

Using the proteolytic enzymes Trypsin and Chymotrypsin in a proprietary formula accomplishes a biological process that breaks down the structure of hair-producing cells.

For lasting hair reduction, it is necessary to break down these hair-producing papilla cells, located at the bottom of the follicles and accessible only when hair is in its growth phase. The combination of the two synergistic proteolytic enzymes Trypsin and Chymotrypsin improve the efficacy of each for better results over comparable products that only use one enzyme.

Waxing before applying Depilar System, leaves the hair follicles open and empty. When the Depilar System reaches the papilla cells at the bottom of the open follicles, the cells are broken down, effectively preventing further hair growth and ridding the body of unwanted hair.

## Things to remember after each treatment

After a treatment with the Depilar System, follow the same skin care regimen you would after a regular waxing including:

- Avoid sunbathing and tanning beds for 24 hours
- Do not use perfumed creams, selftanners, make-up or deodorant for 24 hours
- Do not remove any hair between treatments, including shaving
- Consult your esthetician or skincare specialist for additional guidance

## Impressive results

Depending on the area of the body, an application of the Depilar System only takes a few minutes. It is painless and leaves the skin smooth and supple between treatments.

Most clients will experience extended hair re-growth time on the treated area, while waxing becomes less painful and the number of hairs growing back are reduced with each treatment before disappearing all together.

## Advantages of the Depilar System

The Depilar System offers several advantages compared with other hair removal methods:

- Removes unwanted hair for lasting results
- Gentle and efficient, with no side effects
- Works all over the body, on all skin types and hair colors
- Each treatment only takes a few minutes
- Treatment prices are lower than other lasting methods
- Prior sunbathing has no influence on efficacy
- Does not contain parabens
- Contains only enzymes of natural origin
- Well tolerated - allergy tested with no adverse effects
- Product not tested on animals
- Uses environmentally friendly packaging and recycling program
- Manufactured in the USA
